

## .....for lovely feet

The treatment of excessively callused heels over 3 weeks with Laufwunder callus reduction cream followed by a one week after treatment using Laufwunder Hydrobalm showed a conclusive result.

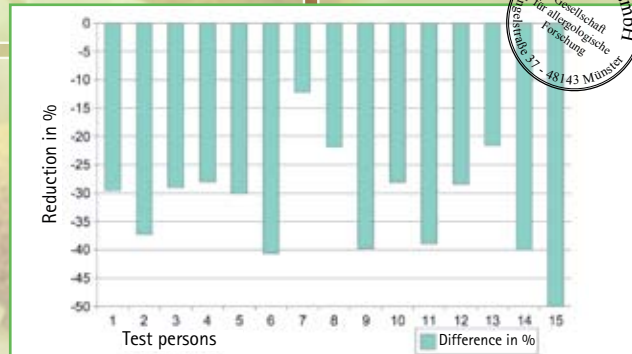

callus reduction cream

hydrobalm

- reduces the thickness of callus by 30% on average
- no unwanted skin changes
- very good skin compatibility

A 3 week dermatological usage test with sonographic callus thickness evaluation on 15 samples showed the following

### Quality

Laufwunder footcare products are a combination of skin friendly, tested raw materials with effective plant extracts and natural materials.

### Moisturising foot balm

a caring product with camomile and witch hazel. With its moisturising properties dry skin becomes smooth and flexible.

### Schrundena callus cream

is a specialised cream for the use on rough, dry and cracked skin. It helps to reduce the formation of hard skin and cracked heels.

### Environment

By using hygienic aluminium tubes it is possible to use only the mildest preservatives. Aluminium is easily recyclable therefore environmentally friendly.

### Recommendation

Laufwunder footcare products are only available where you will receive trusted, professional advice: podiatrists, footcare specialists and nominated specialised distributors.

## Callus Reduction Cream....

Areas of excessive hard skin on many feet are not only an aesthetical problem but often a functional problem too. The new callus reduction cream with salicylic acid, allantoin and willow bark extract safely eliminates callus and is skin compatible.

In the shortest of time, **Laufwunder** callus reduction cream will encourage soft and smooth skin on the foot. Salicylic acid, allantoin and valuable willow bark extract smoothes dry and cracked callus and visibly reduces callus within 3 weeks. The cream is absorbed quickly, non-greasy and protects the skin from renewed callus formation.

Use: Massage onto the affected areas twice a day.

The course of treatment may be repeated several times a year

After the completion of the 3 week course of treatment we recommend the daily use of **Laufwunder** hydrobalm.

- reduces callus by up to 30%
- cares for the skin with willow bark extract
- for soft smooth skin
- works quickly and reliably
- with salicylic acid and allantoin

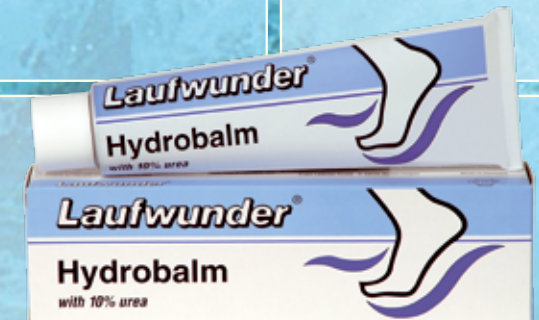

Available in: 30 ml tube

## Hydrobalm with 10% urea

Increases skin moisture by more than 24%

**Laufwunder** Hydrobalm is a special moisturising cream developed especially for the feet, easily applied and easily absorbed for really dry skin. In addition the well balanced oils and fats in Hydrobalm reduce the loss of moisture from the skin. The proven active substances in aloe vera and allantoin calm the skin and inhibit skin irritations. The concept of well balanced active substances makes **Laufwunder** Hydrobalm an exceptional skin care product for dry and sensitive skin. Also suitable as an after treatment following a callus reduction cream course.

- with 10% urea
- increases moisture by more than 24%
- good skin compatibility
- clear improvement in the skin's structure
- clear improvement in the stress tolerance of the skin
- with regular use dry skin areas around the foot are rehydrated and regenerated
- distinct effect even after the first application

Available in: 75 ml tube  
30 ml tube (ideally for the journey)
